Procedure: Gobankongrates found the cost of living in the 50 largest cities in the United States by analyzing the following factors: (1) Cost of living index for transportation, utility, transportation and healthcare from the best places of spalling. The annual expenditure amount in each category of the Bureau of Labour Statistics was multiplied by each index 2017 Consumer Spending Survey, which means that household annual expenditures meant annually for each type; (2) rental expenses were made from the Rental Value Index for a family residence by February 2019 of The District, and 1 Was multiplied by 2, to get frequency annual costs on rent; (3) the rates of the rent were far from The February 2019 Median Home price of The Zallow, and The Rent Calculator of The Zallow was used to determine the cost of the home and monthly repayment of the loan for each given city on the basis of a 30-year fixed loan. The payment of the loan to get the frequency amount was increased by 12; (4) taxed household income was from the 2017 U.S. Community Survey of the U.S. Census Bureau (this is already income). Once all the data was found, the amount of annual expenditure was counted by including annual expenditures for each type. Gobanconggratis paid the annual expenses for both people to pay the rent and for those who rent separately And the median income was made annually. For those who pay a loan and rent it out to see how much money is needed or left for each city. Gobankongrates then used 50/30/20 government, which assumes that 50% income should go towards needs, 30% should go towards discretionary spending and 20% should go towards savings. 50% income is annual expenses, and this amount was used to find the extra income needed for spallorgas and savings.
